The Road Safety Markings Association
Providing Road Marking Services to the UK since 1952 Wilson & Scott continues to offer solutions for our clients from small scale developments, car parks and even school playgrounds up to major motorway and airfield schemes.

In April 2011 Wilson & Scott marked the route of the London marathon for the 27th consecutive time and are already engaged on preparation work for 2012 London Olympics.

With a nationwide presence served by depots in the North and South of England and Scotland, the company offers a range of marketing products to suit every surface type and operational performance requirement. The range includes coloured surfacing options and anti-skid material for roads, bridges, link-spans and ramps.

RS Clare & Co Ltd
QUALITY. CONSISTENTLY

Road Markings
Highest quality, to meet all national / international standards

Anti-Skid Surfacing
Full BBA accredited Type 1 high friction range

Consistent High Quality
Utilising only the best available raw materials

To see how our quality commitment can make the difference to your operations, contact our sales team.

As the UK’s longest established lubricants manufacturer, RS Clare & Co was delighted to win The Queens Award for International Trade 2011
Welcome to the thirteenth edition of Top Marks, the annual publication of the Road Safety Markings Association (RSMA), the trade body for the road marking industry and the largest specialist highways trade body in the UK. In this edition we take a close look at a diverse range of issues that reflect the wide variety of activities, views and services that involve the road marking sector and building successful businesses during times of economic pressure.

WHERE DO YOU GO FOR A ONE STOP SOLUTION TO TRAINING & DEVELOPMENT?

Whilst supporting its’ members to get a fully trained workforce, RSMA has developed expertise in sourcing and delivering all types of training and development from NVQs to University courses. Read how this has led to the development of the National Highways Academy and a one stop shop for all your company’s training and development needs. Be signposted to better training and development solutions on pages 15 & 16

ENGINEERS AND WHITE LINERS IN JOINT CALL FOR IMPROVED SAFETY

IHE and RSMA issue a joint call for government to support experts call for better highway infrastructure to save lives on UK roads. Details of first joint road safety call from leading client and contractor organisations on page 12

PROVIDING SUPPORT ACROSS THE ROAD MARKING SECTOR TO BUSINESSES SMALL AND LARGE

In nearly 35 years of representing the road-marking sector RSMA has always tried to respond to the need of all of its members both small and large. In recent years the Association has grown significantly, with membership expanding by over 40% in the last six years and by over an eighth in the last 12 months alone to a record of 93 member companies. The Association seeks to support and represent members through a variety of services and activities pertinent to all members. Our service base includes:

- Sole delivery body for the road marking apprenticeship
- NVQ Assessment and related activities
- A comprehensive range of training services covering everything from management training to ADR, First Aid and more industry specific courses; all sourced at discounted rates through the Association’s unique Training Brokerage
- A full range of insurance services designed to help members reduce the impact of the premium rises that have hit the construction sector hard over the last few years
- Quality Assurance Certification and Consultancy Services
- Environmental Consultancy
- Discounted Industrial & Safety Clothing
- Health & Safety Consultancy delivered directly into member companies
- IOSH and RTITB accredited training Centre
- Provision of safety equipment
- A range of specialist industry publications including: RSMA Update Your Roadmarkings, RSMA Safety Code of Practice and StanSpec the standard specification for road marking clients
- Industry Conferences and Seminars

ARE THERE KEY AREAS WHERE ALL BUSINESSES COULD IMPROVE TO MAKE THE DIFFERENCE IN DIFFICULT TIMES?

Professor David Rae Professor of Business & Enterprise and Director for Enterprise & Innovation at the University of Lincoln, who has worked closely with RSMA and a range of highways companies throughout 2011 on the Highways Business Inspiration Programme, outlines what he sees as the ‘six rules for business’ in meeting the challenges of these difficult times. See Prof Rae’s article on pages 7 & 8

WHAT ARE RSMA UP TO IN LOBBYING PARLIAMENT?

While all we seem to hear in the news is cut, cut, cut, the RSMA have been working hard to try and protect our sector from the worst excesses of the Government spending axe. As part of our campaign we have been measuring the quality of Britain’s road marking network, writing to and meeting with MPs and being lobbying hard for an inquiry into the apparent low quality of road markings and the lack of monitoring by clients at all levels. Read more on the campaign on pages 4 & 5

WHY DO SOME BEHAVE IN A SAFE MANNER WHilst OTHERS DON’T?

Following the success of the third RSMA Safety Forum Conference, Glenn Riddsadle of Gauged Solutions looks at why some behave safely and how a safe approach to work can boost the bottom line. Find out more on page 11

Editor: George Lee

Whilst every effort has been made to ensure the accuracy of the contents of Top Marks, the RSMA cannot accept any liability for any inaccuracies or omissions, howsoever caused.
Nearly a third of the length of Britain’s single carriageway A roads have white lines so worn out that they do not meet recognised standards – this was the conclusion of the LifeLines Report, an assessment of more than 1,500 miles of the network, carried out by the RSMA and launched earlier this year. This more detailed survey comes after findings that show clearly that eight out of ten of Britain’s most dangerous roads have the most worn-out centre-line markings of all.

Two-thirds of all UK road deaths and serious injuries are on rural A-roads. Yet, of more than 60 single-carriageway A-roads surveyed, totalling more than 1,000 miles, on average 14 per cent of road markings are completely worn out; and a further 15 per cent fall into the “amber” zone and should be scheduled for immediate replacement. Just 29 per cent of lines reach the acceptable level of visibility.

The quality of markings on major A-roads is in line with those on motorways. Of the 470 miles of A roads and motorways surveyed, one in five falls below the minimum specifiable standard and should be scheduled for replacement while eight per cent have centre line markings so worn that they are barely visible. Just over a third of markings on dual carriageways and motorways make the recommended rating used by our industry but there has been a significant drop in the quality since 2008, when 69 per cent of markings on duals reached this grade and 49 per cent on motorways.

These motorways and strategic A-roads are managed by the Highways Agency, which has clearly specified standards for the quality of road markings. Two years ago, just two per cent of our major road network had markings that rated virtually non-existent. This figure has risen at an alarming rate, and now, nearly a tenth of the centre lines on our trade routes are dangerously worn.

Most of the single-carriageway A-roads in the survey are managed solely by local authorities. The RSMA is concerned that Highways Agency ratings for road markings have never been formally adopted by local authorities, leading to inconsistent maintenance standards on UK roads and the potential for the significant maintenance shortfalls identified in the RSMA report. The high risk of head-on collisions on single-carriageways means centre-line markings are critically important to guide road-users safely on these roads.

Money’s NOT too tight...

The contemporary emphasis across the whole road safety sector is on simple measures saving lives.

The Road Safety Foundation produces a highly respected annual analysis of the weaknesses of the UK’s road network. Its latest report highlighted the sobering thought that more than 300 people in the UK are alive today or have avoided the prospect of a lifetime of special care because just 15 roads have had simple improvements put in place. On these 15 roads alone, fatal and serious crashes dropped 62 per cent from 494 to 190.

What were the improvements to these roads? Flyovers? Bypassing villages? No, nothing so elaborate or costly.

The most improved road - a stretch of the A4128 in Buckinghamshire – has been made safer by the innovative use of solar-powered road studs to improve night-time visibility following several fatal collisions in one specific section. It has moved from one of Britain’s highest risk roads to one of the safest. Over the last two surveys, fatal and serious collisions on this road have dropped by 89 per cent, from 19 to two.

What’s more, enhanced road markings feature as a contributing factor in eight of the 15 most improved roads highlighted in the Road Safety Foundation report – and it is measures such as improved centre lines that are paying back the costs of investment in an average of 10 weeks.

It is the Government’s role to provide well-researched and informed guidance for local highways authorities when it comes to specifying safety measures. It is clear that this year’s LifeLines Report presents evidence of sufficient public concern to merit an inquiry by Parliament’s Transport Select Committee, and that’s something we are seeking on behalf of the industry and of road users.

We issued a formal call for a Select Committee inquiry into the declining maintenance of road markings, as well as the lack of enforcement and in the case of local authorities, the absence of any acknowledged standards. The Committee has not been able to slot the inquiry into the coming parliamentary year so the RSMA will continue to lobby for its inclusion in the following year.
Copies of the LifeLines Report have been sent to MPs, Transport Select Committee members, Government, Government agents, policy and highways, transport and road safety sectors – along with briefing notes. We have met with the chair of the Select Committee, Louise Ellman MP and the Roads Minister, Mike Penning MP and other MPs to express our concerns and push for action.

Our activities have generated a resounding message of support from the Chairman of the Police Federation of England and Wales. It also prompted several MPs to ask for personal briefings on the campaign, and the RSMA has advised two MPs with parliamentary written questions for them to table in the House of Commons asking for assurances that highways agents and their contractors will adhere to given standards.

One MP has also promised to visit Eastern Road Markings in Colchester, the RSMA member company in his constituency, and bring the local press along to highlight the need for better maintained markings.

We are continuing to raise the issue of standards – and lack of them – among other road safety organisation, including the Parliamentary Advisory Council on Transport Safety, the European Road Assessment Programme and the AA, and will be seeking further meetings with organisations representative of local authorities and highways engineers.

As a trade association and industry, the roads markings sector has the opportunity at present to position itself for maximum gain. There are two riding factors in public policy at present which work in the sector’s favour. Firstly, budgets are being cut and money is short. Secondly, there continues to be growing public and professional concern about safety, and in particular road safety. Combine these two factors and it is evident that the solution is the provision of low-cost, effective road safety measures.

What does independent research show time and time again to be one of the most low cost and effective ways of making the UK roads safer? - simple road markings.

The RSMA is in a good place at present. It has a good and strong message to deliver and the more it repeats it the more both the general public and those in a position to change funding and policy decisions hear it, the more they will appreciate the need to invest in and maintain good-quality road markings throughout the UK.

TIMES ARE TOUGH AND WE ALL NEED A BIT OF INSPIRATION

As you would expect from the highway sector’s leading trade body, RSMA have taken the initiative in developing new methods of supporting the sector. One of these initiatives has been working with the University of Lincoln Business School to develop the Highways Business Inspiration Programme (HBIP). The 4 day strategic management programme for senior managers, which with the financial support of CSkills is currently available to any highways sector business free of charge, has built upon the successful University of Lincoln Business Inspiration Project and adapted it to focus on the pressures pertinent to businesses working in the highways sector.

In this article Professor David Rae, of the Business School and academic lead on HBIP provides an outline of his six rules of surviving the current downturn and issues an invitation to businesses to come onto the course and be inspired!

RAE’S 6 RULES OF BUSINESS:
HOW TO SURVIVE AND SUCCEED IN A DOWNTURN

Professor David Rae,
Director of Enterprise & Innovation, Lincoln Business School, University of Lincoln

It’s often said that people learn business skills by experience rather than in the classroom. It may seem odd that a Professor in a Business School largely agrees with this view. Much of my own experience, in business and working with owner-managers over the past 20 years, confirms the value of real-life learning and what I call ‘practical theories of business’ which people develop from finding out ‘what works for them’. Rarely do you get there first time, and it can mean finding out what does not quite work and failing a number of times before you get it right.

There is a short-cut to learning only from your own experience, and that is by gaining access and learning from your business peers. Our Highways Business Inspiration programme run in partnership between the National Highways Academy and Lincoln Business School is a highly practical approach which enables business owners and managers to share their experiences and insights into the problems, solutions and successful approaches they have learned and use in their own businesses.

We have all found over the past three years or so that managing a business successfully in a recessionary economy is much more challenging than in the ‘boom times’. But it’s also true that those businesses who can manage effectively in a downturn will be better placed than others to prosper as the economy improves.

Here are ‘Rae’s 6 rules for business’ which are a series of practical, learned-by-experience suggestions for managing your business effectively in today’s ‘flat-lining’ economy. Which of them are you already using? Which could work for you?

1. CUSTOMERS

▪ Find and keep your own customers - you have to be able to solve their real problems & sell yourself effectively.

Too many businesses rely on ‘being in the supply chain’, have too few major customers and do not invest personal time and effort in developing customer relations – remember, ‘people buy people’.

▪ Check their credit rating and monitor their speed of payment.

You have not made a sale until they’ve paid the bill. Some customers have bad habits over slow payment, some are big enough to know better.

2. RISKS

▪ Assess risks & their potential impact – e.g. customer or supplier closure

▪ Develop contingency plans to mitigate risks

We live in a risky business environment. Don’t assume everything will be OK – look at the potential risks, pitfalls and liabilities for your business and at how you can reduce the biggest risks or anticipate how you will respond if the worst happens.

3. OPPORTUNITIES

▪ Be creative and opportunistic to create new value - e.g. new pricing, products & offers to stimulate demand

▪ It takes longer and costs more than you think to innovate or do anything new.
There are always new opportunities in a downturn – other businesses will be suffering and it may be possible to acquire plant, people and clients at good prices. Innovation and new approaches can open up promising opportunities but experience tells us that when doing anything new it usually costs more and takes longer to implement than you first expect, so be prepared to double your investment of time and money for those new ideas. That means doing your research to find out just how attractive an opportunity it is in the first place.

4. MONEY IN – MANAGE CASH AND BREAK-EVEN
- Forecast and monitor your cash flow very closely
- Aim to maintain/increase profit margins rather than increasing sales turnover (bottom line not top line)
- Measure breakeven on the business, customers, products, staff.

Beware of ‘buying’ work at cut-throat margins. Profitable businesses fail because they run out of money, often suffering from slow payment and lack of credit. Aim to be cash-positive and you will sleep better at night. Break-even is the point at which the business, a person or a contract starts making a profit and is always an important measure. I remember a scrap merchant in the Black Country (where else?) pointing to a pile of crushed cars and saying ‘when it reaches the fence we’re in profit’ – we all need a ‘rule of thumb’ like that.

5. MONEY OUT – MANAGE COSTS & DEBT
- Keep your fixed costs down: cut costs which are not essential.
- Aim to grow sales on a variable cost basis – borrow, rent or lease assets but don’t buy things or hire people you don’t need.
- Keep in contact with creditors & lenders to avoid nasty surprises.

Businesses can be wasteful; you don’t need to be. Invest your money only in assets and projects which will provide a strong return. The worst time to ask a lender for more money is when you really need it. Up to date management accounts are essential and you must read them to monitor the health of the business.

6. PEOPLE
- Show positive, realistic leadership with open communications
- Set & monitor clear & realistic targets – sales, costs, project completion, debt etc.
- Move unproductive people & customers out of the business.

At the end of the day it’s about how you manage relationships with people. You can tell a lot about a business from the quality of interactions between its managers, employees, customers and suppliers. The business culture, or ‘way we do things around here’, often reflects the personality of its main-man – think of Michael O’Leary, chief executive of Ryanair. What are the positive effects of your personality on the business, and what are the negative effects, or ‘shadow side'? Try asking your wife or partner about this!

These are some learning points from my own experience from working with many businesses. The principles of running an effective business do not actually change as much as the business environment. Feel free to share your own insights about what works for your business with me, by email to drae@lincoln.ac.uk or by twitter @warycat

SPECIALISTS IN PARTNERSHIP – DELIVERING ADDED VALUE

The Highways Business Inspiration Programme is a partnership project between RSMA and the University of Lincoln, which has received financial support from CSkills. The programme is one of a number of groundbreaking courses that RSMA has adapted/developed specifically for the Highways sector through our training arm National Highways Academy (NHA); other courses include those in Environmental Management, Health & Safety, and Culture Change – delivered in close partnership with highly qualified experts in these fields, allied with our extensive highways experience. By working in partnership with specialist and academics, to make courses relevant to our sector, NHA can deliver real added value to our customers. More information is available on page 15 & 16 of this edition of Top Marks, online at www.nhasolutions.co.uk or by calling NHA on 01427 610396.
Weatherline®
the new generation in road marking

Through leading-edge technical design and processes, we are able to combine sustainable resins with exceptional materials to produce the ideal marking for your project.

Weatherline® is the first lay flat, wet night system that surpasses BSEN 1436 RW3.

Simply put, the technology is in the marking, making this one of the most versatile road marking products. This helps both contractors and clients improve road safety in the wet, whilst meeting their specification performance requirements.

- Requires standard machine application equipment
- No embossing ensures no clogging up of channels
- Easy to use
- No extended cure time required
- Quick Drying Time
- Meets specification BSEN 1436 RW3

Developing Health & Safety practices across the road marking sector has become a core activity of RSMA over the last five or six years. The Association’s Health & Safety Forum, made up of RSMA staff and member volunteers is now looking to see how the Association can play a role in ensuring that safety becomes core business value of member companies. In this article Ian Mumby, RSMA Health & Safety Officer and Glenn Ridsdale of Gauged Solutions look at the latest RSMA project designed to transfer safety into a core business practice.

Over the past five years the RSMA Health & Safety Forum has been directly involved in promoting changes in the approach of the sector to all things health & safety – the Forum pressed for the Association to employ a full time health & safety professional, the Forum promoted the Safer Way training video and was integral in the development of the RSMA Best Practice Guide – including the traffic management section scheduled for distribution at the end of 2011.

One of the central projects for the Forum at this time is the investigation and development of behavioural safety programmes to help companies change their culture and approach to health and safety. Whilst this initiative is part of a larger programme that has led to the Association becoming a recognised centre for IOSH Working Safely and Managing Safely training programmes, the focus of the forums input into the project is looking at how businesses can initiate and sustain fundamental change in health & safety practice across their workforce as a whole. In many respects the project will for many companies be pushing against an opening door as many businesses are already striving for an improvement in safety performance, and are therefore looking to culture development and in many cases culture change programs to deliver that improvement.

Unlike a formalised safety management system, culture change programs look to address the challenging topic relating to the behaviours of people. Behavioural change is a complex subject but when approached in a pragmatic and engaging way, it is seen by many leading businesses as a next step, to an improved safety performance.

In terms of being able to transfer safety into a true core business value, there are six key dynamics that demonstrate clear and visible commitment to safety leadership, and they are:

- Top Management Commitment
- Middle Management Involvement
- Safety Performance focused supervisors
- Active participation of the workforce
- Positive perception of safety by the workforce
- Constant review of working practices

Before considering any form of behavioural change programme it is recommended to first of all, understand the culture of your business, and where it sits with respect to the above six dynamics. To do this, an initial assessment of the prevailing culture and climate needs to be conducted. This is achieved by adopting a scientific approach, using workplace observations, one to one interviews and focus groups. The outputs from these sessions are utilised to formulate a bespoke safety climate questionnaire. Once formulated, the safety climate questionnaire is distributed to all employees for completion and then analysis.

On completion of the climate questionnaire analysis, this along with the outputs from the focus groups, work observations and one to one interviews are formulated into a management diagnostic report for the board and senior management review.

As shown in the core value dynamics above, effective safety leadership starts from the top of an organisation, with demonstrable belief from the board of directors and senior management team that safety is aligned as a top priority within their core business values. With this in mind the diagnostic report from the research is delivered to a board level interactive workshop, where ideas and suggestions are used to train various levels of leaders within an organisation on the subject of behavioural leadership and safety leadership techniques.

Culture change is developed through visible leadership and workforce coaching and support. Understanding how to engage with people with effective transactions, being prepared to make positive safety interventions and rewarding safe behaviour and practices, form the basis of the training, which is rolled out from the outputs of the leadership workshop, and also the onsite practical implementation of the program.

In association with the RSMA and NHA, Gauged Solutions partnering with Awaken Consulting & Training Services offer bespoke consultancy and training services in relation to cultural change programs. We are pleased to announce, the launch of our fully accredited Neuro Linguistic Programming Diploma in Behavioural Safety and Safety Coaching. This is considered the UK’s first qualification of its kind, with regard to the accreditations it offers, and has been fully developed to offer a formal qualification in culture change techniques and is available in partnership with RSMA and the National Highways Academy.

While this initiative is seen as a coaching mindset to facilitate behavioural change, it is sufficient enough to not only conduct but actually expect positive and negative behavioural interventions,

Some of the key learning outcomes covered in the Diploma in Behavioural Safety coaching include:

- Understanding when to introduce a behavioural based program
- The role of leaders and managers
- Errors and violations analysis
- Behaviour and its link with positive and negative consequences
- Identifying the phases of communication and being able to effectively communicate in one to one and group situations from a coaching mindset to facilitate behavioural change.

- Use effective listening skills and linking these to effective questioning techniques to gain information and understanding
- Utilise outcome focussed coaching and communication to facilitate a positive attitude towards health and safety.
- Develop skills in effective communication, coaching and leadership through rapport and relationship building.
- Develop skills in giving and receiving feedback.
- Gain an understanding of how other people think and how to structure information that enables them to develop greater ownership for health and safety.
- Ability to effectively present information in a variety of formats, including formal reports and referencing.
- Effective leadership skills in organising, running and managing informal and formal meetings.
- Effective leadership, coaching and management skills in influencing individuals and in resolving conflict.
- Effectively plan, design and run presentations to a range of audiences.

If you are interested in either the NLP programme or general training or consultancy services regarding behavioural safety and behavioural change please contact RSMA Health & Safety Officer Ian Mumby on 01427 610101.
The Institute of Highways Engineers (IHE) and the Road Safety Markings Association (RSMA) have co-operated on a number of small projects over the years, however, in issuing their first joint statement on improving road safety, the two organisations have signalled that the co-operation between the predominately client oriented IHE and the majority contractor led RSMA is likely to increase in the years ahead, as industry professionals from all sides seek to find solutions to problems caused by funding shortages.

In their joint statement The Institute of Highways Engineers (IHE) and the Road Safety Markings Association (RSMA) have called on the government, clients and industry to respond positively to the recently published consultation paper from EuroRAP and EuroNCAP, which emphasised the life saving potential of currently available vehicle technology working with improved highway infrastructure, such as better performing white lines.

In the consultation document issued jointly by the safety organisations, Roads that Cars can Read, EuroRAP and EuroNCAP assert that the condition of road signs and markings could be the greatest hurdle in reaping the benefits of new in-car safety technology.

According to the report, technologies now arriving in new car showrooms are forecast to save thousands of European lives as they trickle down into universal use. Increasingly cameras and sensors are used to read the road ahead and help the vehicle react early if drivers are heading into danger; though, obscured signs or faded road markings are hard to read whether using the naked eye or an in-car camera. The new report includes a survey of six countries to probe how signing and marking practice still varies around Europe after more than half a century of international conventions.

John Dawson, Chairman of the European Road Assessment Programme (EuroRAP) says: “Huge sums have been spent developing technology that is revolutionising the safety of our vehicles. Little attention has been given to the quality of basic signing and marking with which drivers currently have to cope. We’ve found no country which systematically measures the quality of signing and marking being achieved. A century after the cat’s eye was invented, technology is again driving this rethink of how the road ahead can be read safely. The key lesson is that what is good for humans is good for machines.”

Roads that Cars can Read recommends that both the roads and motor industries this decade should target improved signing and marking on the ten per cent of Europe’s roads where the majority of travel and the majority of deaths are concentrated involving higher speed crashes.

“The majority of European deaths are on national roads and busy regional roads outside towns. The single carriageways are Europe’s killing fields. We should focus this decade on ensuring the quality of the signing and marking on these busy open roads whether or not the technology needs it,” says John Dawson.

“We now need a full survey of the quality of road signs and markings to measure the real-world variation in signing and marking across borders and define the working tolerances that are acceptable.”

Commenting on the report IHE President Steve Spender and RSMA Chairman, John Lloyd said, “The EuroRap/EuroNCAP report correctly highlights that the combination of high tech vehicle technology and low cost, low tech infrastructure improvements such as better quality road markings can, with better planning and relatively low levels of investment, save a disproportionate number of lives and reduce serious injuries on our roads. Since reducing accidents has a positive economic impact for the country as a whole both the IHE and the RSMA call on the government to respond positively to the consultation and commit to take positive action to exploit the opportunities the report highlights.”
A commitment to quality, service and above all road safety...

From the moment you set off on the road with us...

...you'll benefit from more than 40 years of industry experience in road marking and road safety surfacing solutions.

Hitex International has evolved into a Group of companies with unrivalled and comprehensive skills, working together to provide the highest quality materials, equipment and contracting services throughout the UK and a growing customer base internationally.

Hitex have a reputation for technically advanced road marking, demarcation and high friction surfacing solutions to meet the demands of numerous highway situations and in all climatic conditions.

Passionate about road safety

The fundamental ethos of the Hitex group is the desire to improve road safety.

For us, there is a compelling moral and financial case for more commitment to road safety, that's why we strive to design our low cost engineering solutions to help you reduce accidents and save lives.

Totally integrated service

Integration between Hitex materials and equipment allows much more control in delivering quality, performance and safety.

We provide the complete package of materials, equipment and contracting services to consistently deliver innovations in road safety solutions — right down the line.

A ONE STOP SHOP FOR THE ENTIRE HIGHWAY SECTOR’S TRAINING & DEVELOPMENT NEEDS

The National Highways Academy is the first truly nationwide provider of training and development solutions for highway specialists.

- Offering everything from operative apprenticeship and competency training through to quality management, environmental management solutions and university based senior management courses.
- Over 300 courses plus a bespoke facility, NHA truly is a one stop shop for the highway sector’s development needs

Top Marks reviews the development of this RSMA initiative and the services NHA can provide to specialists throughout the highways sector and how it is literally ‘Setting the Standard’ for service and support to the sector.

When the Road Safety Markings Association established the National Highways Academy (NHA) in 2006, the initiative was designed to help accelerate the attainment of NVQ Level 2 qualifications for road marking operatives; through the establishment of a streamlined approach to qualification attainment based on industry focussed portfolios and a more dynamic approach to competency appraisals.

Fast forward five years and the NHA has had a significant impact in ensuring a fully qualified workforce in the road marking industry, however, its impact is now being felt much further afield as it completes its transformation into a provider of the full range of training and development services across the entire highways sector.

John Lloyd, Chairman of RSMA explains, “The Association had already operated both an NVQ Assessment Centre and an industry wide training brokerage for members when we decided to establish the NHA and it was only with the rolling out of a more progressive approach to the NVQ assessment process did we start to see the potential for a fuller range of industry wide training and development services that the NHA now provides to companies across the highways sector, from road markers to surface dressers to ground stabilisation specialists, delivering qualifications from Level 2 NVQs and Skill Apprenticeships through to Environmental Management Certificates and University led Strategic Management courses.

For George Lee, National Director of RSMA and the driver behind the initial establishment of the National Highways Academy the organisation offers unique opportunities for businesses across the entire range of specialisms involved in the highways sector. “The beauty of NHA is that it is run by professionals with an intimate knowledge of the highways sector for businesses within that sector, providing a synergy of experience, knowledge and understanding of the sector. Rather than having just the limited knowledge of one particular facet of the sector, the trainers and staff working with and for NHA have a more holistic view, being both aware of and identifying trends across the sector, whether that be in new legislative requirements or best practice approaches impacting on one specialism that may benefit organisations in other specialisms or even expose them to risk. This approach means that NHA customers receive a depth of support and expertise that is often missing or simply unavailable from smaller providers delivering isolated services or delivering into a limited number of sectors”

However, NHA believes that it is not just this one stop shop approach bringing together a wide range of services but also its ethos that marks it out as different to other providers in the highways sector – this is an ethos that sees NHA tailor its approach to meet each business’ individual needs. NHA has a national track record of helping businesses change the way that they do things; focusing on building a working partnership with each individual business to deliver the solutions they require, whether that is better training solutions, improved health and safety or a redefined approach to their environmental impact.

A ONE STOP SHOP WITH BESPOKE AND OFF-THE-SHELF SOLUTIONS

The NHA ‘one stop shop’ approach brings together recognised and externally accredited courses alongside bespoke solutions for individual customers thereby providing a range of services that cannot be matched by any other provider in the highway sector. Whilst many clients look for standardised qualifications, sometimes the most effective way to meet your organisation’s commercial and learning objectives is by commissioning a programme of training specifically for you that may merge individual business requirements with standardised qualifications. Detailed below are some of the areas where NHA can deliver for highways businesses whether with standardised courses or bespoke solutions for individual circumstances.

>> HEALTH & SAFETY

Excellent training is essential to getting health and safety at work right. That’s why NHA deliver training tailored to suit everyone involved.

NHA Health and Safety service does far more than just ‘tick the box’. Not only does it put
the essential information across and deliver the skills needed, it will also inspire people to put what they’ve learned into practice, and because NHA create the course around their customer’s organisation practices and policies it can be put into practice immediately after the training has taken place.

>> ENVIRONMENT
In an age where integration of environmental legislation is pertinent in the running of any organisation, environmental management and awareness training is no longer the exclusive preserve of large companies.
Training and management of environmental impacts can be the key to the success of any business. NHA deliver environmental training and development for your staff, and can work with you to improve your organisations efficiency.
Environmental training can range from day-to-day awareness training up to the NHA Environmental Certificate and examination by the Institute of Environmental Management and Assessment.

>> QUALITY MANAGEMENT SYSTEMS
NHA offer a comprehensive portfolio of quality management solutions to help organisations in the understanding of processes and methods for process improvement, ideas and quality management tools and techniques - all of which are central to organisational and change management and performance improvements for individuals, teams and organisations.
NHA provide the support, tools, materials and resource for practical application on new systems as well as ongoing performance measurement and management.

>> MATERIAL HANDLING
NHA courses are designed to refresh, convert or develop new skills to provide your business with improved performance in moving and/or handling goods in logistic operations; including fork lift operator training, crane operation and lift platform training, manual handling and training in the safety and security of hazardous goods and materials.

>> DRIVER TRAINING AND ROAD TRANSPORT
NHA deliver a wide range of driver training solutions from Driver Assessment through to LGV Training.
Delivered on site, at a time to suit customers’ businesses, night or day, NHA courses are specific to customer needs, following customers’ policies and practices, and are carried out by experienced and qualified trainers.

>> SKILLS TRAINING & APPRENTICESHIPS
NHA are involved in both the delivery and the development of skills training and occupational standards, ensuring that training for operatives in the front line of highway maintenance have the competencies and skills they need to safely deliver quality workmanship. Training to meet specific needs of formal qualifications along with bespoke modular training to address the needs of groups and individual operatives is at the core of NHA service provision.

>> EXTERNALLY ACCREDITED TO MAINTAIN QUALITY
NHA maintains a range of quality accreditations to ensure that the services they provide both set and maintain the standard that customers expect of a market leader.
